

Odootools // odoolangexport

Instructions guide

2019-08-06

<https://github.com/vertelab/odootools>

1. Using the Terminal, go to the actual project.

```
$ /usr/share/odoo-website-client/webshop_client
```

2. Look for a folder named i18n

```
$ /usr/share/odoo-website-client/webshop_client/i18n/
```

Export translation

"This gives you a file called *yourmodule.pot* which should be moved to the *yourmodule/i18n/* directory."

<https://www.odoo.com/documentation/11.0/reference/translations.html>

Odoo 12

<https://www.odoo.com/documentation/12.0/reference/translations.html>

3. Change privileges in this folder by typing...

```
$ sudo chmod a+w . -R
```

4. Follow the instructions from github: "export po/pot file for a module, -m -d -l "

```
$ odoolangexport -m [module] -d [name_of_database] -l [language]
```

```
$ odoolangexport -m webshop_client -d database_name -l sv_SE
```

5. Logout from Terminal

```
$ logout
```

6. Log on again using capital X

```
$ ssh [server_name] X
```

7. Go back to folder:

```
$ /usr/share/odoo-website-client/webshop_client/i18n/
```

8. Use Poedit to edit translations.

```
$ poedit sv_SE.po
```

Install in Odoo 8.

Log on to your server.

Go to Settings > Import / Export > Import translations.
